EDUCATION

B.Sc. Information System (Undergraduate) Expected Graduation: 2027
President University, Cikarang – Bekasi | GPA 3.59 / 4.00 | 7th Semester

PROFESSIONAL SUMMARY

Computer Science undergraduate (7th semester, GPA 3.59/4.00) with hands-on experience across the software development lifecycle (SDLC) — from business process modeling and database design (ERD) to system documentation and deployment. Builds data-driven decision support systems and data pipelines using Python, SQL, and machine learning (XGBoost, Random Forest, Logistic Regression), including EcoRoute AI, a waste-management decision support system, an intelligent DVD rental analytics dashboard, a Dagster-based public holidays data pipeline, and a student graduation-prediction model reaching 94.6% accuracy. Experienced designing relational database schemas (PostgreSQL, MySQL), containerizing data workflows with Docker, and translating business requirements into system features and functional specifications. Holds a BNSP-certified Junior Web Developer credential. Combines analytical rigor with proven leadership managing cross-functional teams, large-scale events, and volunteer initiatives. Actively based in Cikarang–Bekasi and available for on-site placement.

SYSTEM ANALYSIS & TECHNICAL SKILLS

Systems & Business Analysis: SDLC, business process modeling, requirements gathering, functional specifications, system documentation (flowcharts, use cases)
Database & Data Engineering: Entity-Relationship Diagram (ERD) design, relational schema design, PostgreSQL, MySQL, Firebase, ETL fundamentals, Dagster, Docker
Programming: Python, SQL, Java
Machine Learning & Data Analytics: Scikit-learn, XGBoost, Random Forest, Logistic Regression, Ensemble Learning, Pandas, NumPy, Plotly, Streamlit, exploratory data analysis, Orange Data Mining, Google Colab, Jupyter Notebook
AI/LLM Integration: Prompt engineering, LLM integration (Groq API — Llama 3.1, Gemini AI), knowledge retrieval, AI chatbot development
GIS & Mapping: OpenStreetMap
Developer Tools: Git, GitHub
Professional Skills: Leadership, communication, problem solving, project management, cross-functional collaboration

PROJECTS

EcoRoute AI — Waste Management Decision Support System | *Machine Learning & AI Engineer* Jul 2026 – Present

- Designed the system's data model and workflow, engineering a machine learning pipeline (XGBoost, Random Forest, ensemble methods) to forecast waste volume and fleet requirements for operational planning.
- Modeled business processes for route optimization (OpenStreetMap) and built a retrieval-based AI Assistant over a domain-specific knowledge base, giving operators natural-language access to system recommendations.
- Delivered the system as an interactive Streamlit dashboard, unifying the prediction pipeline, routing, and AI Assistant into a single operational tool.

Intelligent DVD Rental Analytics Dashboard | *Full-Stack Data Developer* Apr – May 2026

- Designed the relational database structure on PostgreSQL and built a Python/Streamlit analytics dashboard pairing a machine learning demand-prediction model with a Llama 3.1 AI assistant (via Groq API) for natural-language business analytics.
- Designed the end-to-end data pipeline from PostgreSQL through the prediction and chat components, turning raw rental transactions into real-time, actionable business insights.

Public Holidays Data Pipeline | *Data Engineer — Dagster Capstone Project* 2026

- Built a containerized data pipeline that retrieves, validates, and transforms public holiday data before loading it into PostgreSQL using Dagster assets and Docker Compose.
- Implemented raw_holidays and holidays_table Dagster assets with full data lineage, successfully loading 17 public holiday records into PostgreSQL.
- Added automated data-quality checks and achieved 5 passing Pytest tests; integrated the pipeline into the Dagster workspace via gRPC.

"Amelia" – Interactive AI Short Film (SafeNet Cyberbullying Campaign) | *Lead AI Film Producer & Editor* Sep – Dec 2025

- Produced and edited an interactive short film addressing cyberbullying, using Gemini AI for scene generation and prompt engineering to direct AI-generated visuals into a coherent narrative.
- Designed a branching storyline with two alternate endings and deployed the interactive experience on a web platform, giving viewers agency over the story's outcome.

LEADERSHIP, WORK & VOLUNTEER EXPERIENCE

Talent Development Staff | *Jakarta Mengabdi, Human Capital Division — Jakarta, Indonesia* Feb 2026 – Feb 2027

- Design and execute capacity-building programs for organizational members, defining role qualifications and performance-evaluation criteria.

Project Manager — Pucatso RetRet Event | *President University, Cikarang – Bekasi* Feb – Jul 2026

- Assembled and led the organizing committee, developed the full event timeline, and directed campus-wide promotion to maximize participation.

Usher — Papal Journey | *KMK KAJ* Sep 2024

- Served as an usher during the Papal Journey, assisting guests, providing directions, managing attendee flow, and helping maintain an orderly and welcoming event environment.

CERTIFICATIONS

- Junior Web Developer** — LSP BPPTIK / BNSP, 2025
